Products

OT Push Buttons

Westinghouse Oil-Tite push buttons, selector switches, and indicating lights are designed to prevent the passage of oil, coolant, cutting oil or water. Contacts cannot be fouled by these substances when units are mounted in special Oil-Tite enclosures, machine cavities, or other suitable enclosures.

The Oil-Tite line gives maximum flexibility through the use of two basic parts: operator and contact block. In addition, it offers the advantages of minimum projection in front of the panel, shallow contact block behind the panel, a contact block designed for stacking, and interchangeable operator color caps. For further conveniences, stations can be assembled by the customer using basic components readily available from stock. Oil-Tite units are available in standard assemblies or can be custom built to meet almost any requirements.

PL-221 – Prices Effective March 1, 2015

Products

4-Way Joystick Operator

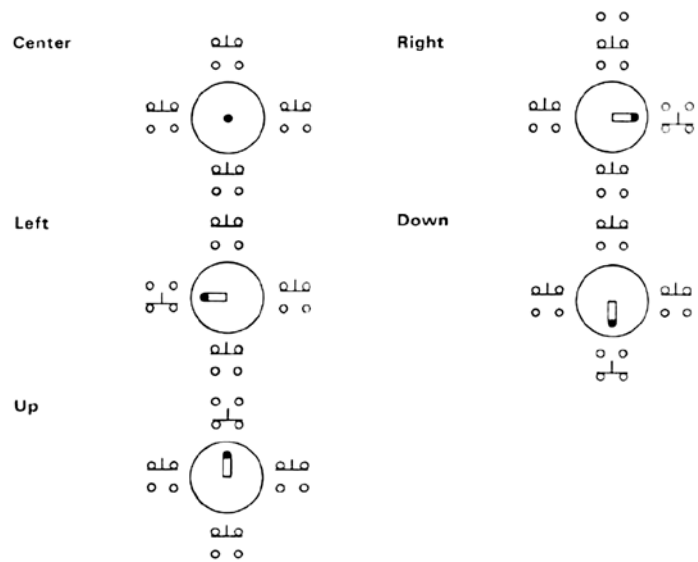

Description	Catalog #	Price
-------------	-----------	-------

4-Way Joystick Operator

Joystick Operator, complete with contact blocks and blank legend plate.

OTJS4 \$860.00

Special legend plate marking as specified, List Price \$63.00 each

Push – Pull Control Units

Description	Catalog #	Price
-------------	-----------	-------

Momentary Contacts

Includes operator, 1 NO and 1 NC contacts and king-size legend plate.

OT1D1AP \$229.00¹

Maintained Contacts

Maintained contact push buttons are operated by pushing the “toggle” action operator, which will remain “IN” until manually pulled out. The contacts are non-teasable which means it is ideal for two-wire control, and “STOP” and “EMERGENCY” applications.
